

Front end coder or designer

Hi. We are looking for extra talent to expand our team in our Rotterdam city center HQ.

We are a tech company developing an Advanced Scheduling and Planning cloud platform for production companies. And the challenges for the development of the user interfaces are huge. We deliver business-to-business solution for high demanding companies that deal with enormous amounts of data.

The current team (a dead serious bunch of perfectionists who do make fun also) are doing an awesome job to keep up with the demand and challenges, but we can use an extra pairs of eyes and hands to keep delivering new user interfaces on time.

This means we are looking for senior developers. You have been in the trenches of front end development for years, in a day job and not only remotely or following courses. You have worked with Typescript for the past year(s). You now about Git, testing and pipelines.

Also, you live in or near to Rotterdam in the Netherlands!

A typical day at Blue Star Planning

Your typical day would start anywhere between 07:30 and 09:00. You continue on your tasks of the sprint and when the full team is up at 10:00, the daily standup will answer your questions and layout the agenda for the day or week.

Typically, hunger strikes between 12:00 and 13:00. When working at the office, that's when the team joins for lunch, usually after enormous debates on where from the many places in Rotterdam city center to get lunch (if the company has not sponsored the pizza or sushi lunch that day).

The afternoon is packed with coding (of course), but alternating with design meetings on the current system or inspirational sessions on new technology. A few times a week these meetings are with the CEO, on progress of development on Blue Star Planning and production planning in general.

We are looking for:

- A Bachelor or Master in ICT (or relevant field or similar level)
- 3 years of experience in a front end development role
- A deep understanding of modern JavaScript
- Work with TypeScript, HTML5 and React
- Implemented SignalR and/or Socket.IO
- Fluency in English
- Great communication and collaboration skills
- A hands-on attitude and passionate approach to solving problems

You will work on (but not limited to):

- Graphs/dashboard
- Interactive workflow systems
- Schedules
- Stacking and sliding panels
- Visualization of real-time data

Blue Star Planning is a Rotterdam based company with an international focus. We operate as a start-up in the center of Rotterdam and develop a microservices platform in the Microsoft cloud

and Kubernetes. Based on your skill and drive, there are many positions in the company you can grow into (support, consultancy, sales).

We love prototyping. You take part in the decision making for technology and architecture, if not downright being the architect. We develop in React, SignalR, Visual Studio and push our code directly to the cloud (no servers in our office!). We love clean code, fast, performant and reusable. And if you break the build...we help you fix it!

So if writing code is totally your thing, you have a love for building complex user-interfaces, and recognize all of the above:

Please let us know and send us a message! We look forward in hearing what would be your perfect job and how we can work together to achieve that.
